GAMA × Tasker

How to automate graphics API switching

Before You Start

Make sure you have all three of these set up before continuing:

- GAMA installed and working on your device
- Shizuku running and permission granted to GAMA
- Tasker installed (available on the Play Store)

Setting Up a Task

A Task is a sequence of actions that Tasker runs when triggered. Follow these steps to create one that switches your renderer.

Step 1 — Open Tasker and create a new Task

1. Open Tasker
2. Tap the Tasks tab at the top
3. Tap the + button in the bottom right corner
4. Give your Task a name, for example: Switch to Vulkan
5. Tap ✓ to confirm

Step 2 — Add the Send Intent action

6. Tap + to add an action
7. Scroll down and tap System
8. Scroll down and tap Send Intent

You will now see a form. Fill it in exactly as follows:

Action	`com.popovicialinc.gama.ACTION_SET_RENDERER`

Package	`com.popovicialinc.gama`

Class	`com.popovicialinc.gama.TaskerReceiver`

Target	`Broadcast Receiver`

💡 *Leave all other fields (Cat, Data, MimeType, etc.) completely empty.*

Step 3 — Add the Extras

Extras are the parameters that tell GAMA what to do. Tap + next to the Extras field and enter each one as key:value.

Extra Key	Possible Values	Required	What it does
`renderer`	`vulkan, opengl`	Yes	Which renderer to switch to
`aggressive`	`true, false`	No	If true, force-stops all apps after switching. Defaults to false.

💡 *For a basic Vulkan switch, you only need renderer:vulkan. The aggressive extra is optional.*

9. In any of the “Extra” parameters, type: “renderer:vulkan” (or “renderer:opengl” for an OpenGL task, without the quotes)
10. Optionally add a second extra: “aggressive:true” (without the quotes)
11. Tap the back arrow to save the action
12. Tap the back arrow again
13. Tap ✓ in the top-right to confirm

Triggering Your Task Automatically

A Task on its own just sits there. You need a Profile to trigger it. Here are some popular options:

By time of day

14. Profiles tab → + → Time
15. Set the time you want (e.g. 8:00 AM)
16. Tap the back arrow, then select your Switch to Vulkan task

When connecting to a specific WiFi network

17. Profiles tab → + → State → Net → WiFi Connected
18. Set the SSID field to your network name
19. Tap the back arrow, then select your task

When an app is opened

20. Profiles tab → + → Appication
21. Select the app(s) you want to trigger on
22. Tap the back arrow, then select your task

💡 *You can have as many Profiles pointing to the same Task as you like.*

Manually (no trigger)

You can run any Task manually at any time by going to the Tasks tab and tapping the play button in the bottom-left. This is useful for testing.

Troubleshooting

- **Nothing happens:** Make sure Shizuku is running and GAMA has been granted Shizuku permission before the intent fires.

- **Toast says 'missing renderer extra':** Check that you typed the Extra exactly as “renderer:vulkan” with no spaces around the colon.

- **Toast says 'unknown renderer':** The value must be exactly “vulkan” or “opengl” in lowercase.

- **Target field:** Always make sure Target is set to Broadcast Receiver, not Activity or Service.
